

BUILD WITH STRENGTH - INSULATED CONCRETE FORMS(ICF)

STANDS THE TEST OF TIME

ICF structures are designed to last for centuries. Unlike other materials, ICF only gets stronger over time and won't rust, mold, rot or deteriorate.

SAVE ENERGY

ICF's strength, durability, thermal mass and energy efficiency make it an environmentally friendly material—especially when you consider the entire lifecycle of the building.

PEACE & QUIET

ICF is energy efficient and virtually maintenance-free — greatly reducing sound transmission from the outside world. About one-sixth as much sound gets through an ICF wall compared to an ordinary frame wall.

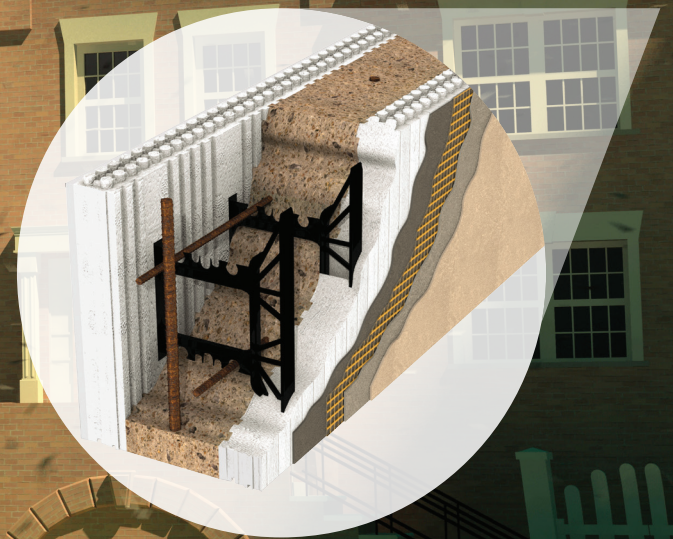

SIMPLE TO BUILD

If a material isn't easy to use, it doesn't matter how strong it is. Good thing ICF can be molded into any shape, size or design you can imagine.

SAFE & STRONG

Building with ICF and concrete gives you a fire resistant structure and a safe structure from all natural disasters. You can exceed building requirements—instead of just meeting them.
