Poly Forms

Metal Accessories

The "SLIDE" pocket is inserted at the end of either the 4" or 6" poly form. Convenient connection to wood with predrilled nail holes.

The "TWIST" pocket provides multiple staking options since it can be easily inserted at any location along the length of any form.

The slide-type "STACKING" pocket permits poly forms to be stacked to achieve heights of 8", 10" and 12".

The versatile twist-in "OVERHEAD HANGER" is adjustable for both curb thickness and curb batter (layback).
