(800) 424-8802

Storm Water Pollution Prevention Plan (SWPPP) Purpose Statement:

This SWPPP has been prepared by Chaney Enterprises for the Broadway RMC Plant in Broadway, Rockingham County, Virginia. The SWPPP has been prepared in accordance with the requirements of COMAR 26.17.02 as described in the "Virginia General Discharge Permit" No. VAG110258.

### 2. Facility Overview

## Description:

The facility utilizes sand, fly ash, admixtures, dry cement, and water to make ready-mix concrete. No chemical treatments are used in the process at this facility. To promote resourcefulness and green efforts, Chaney Enterprises recycles 100% of the waste produced during the manufacture and sale of our ready-mix concrete. Leftover concrete is crushed and sold as clean fill and base material for construction projects, while process water is reused for other purposes.

The facility has a batch plant, batch office, two (2) storage garages, six (6) propane storage tanks, aggregate storage bins, truck wash area, settling basins, and parking areas.

#### Location:

267 N Timber Way, Broadway, VA 22815

## SIC/NAICS Codes:

SIC – 3273 Ready-Mix Concrete Facilities
NAICS – 327320 Ready-Mix Concrete Manufacturing

## Site Drainage:

There are two (2) Discharge Points at the facility, Outfall 001 and Outfall 002.

Process water is confined to the wash basins and recycled in the batch plant, for truck washing, and used for dust control if needed.

The site is composed of the above-described buildings, tanks, and storage areas. Stormwater run-off is directed via grading, to one of two catch basins. The majority of stormwater flows to a catch basin adjacent to the site entrance on N Timber Way and outfall 001. Stormwater from the area the top of the site is directed to a large stormwater basin adjacent to the entrance on Holsinger Road. A stormwater riser leads to outfall 002 from the basin. (See *Figure 3*).

## Discharge Information:

### Sampling Data:

This site is permitted, and sampling is required quarterly. The parameters sampled for are pH, Total Suspended Solids (TSS), and flow. These constituents are analyzed according to direction provided by VADEQ. Discharge monitoring reports will be submitted on an annual basis to:

Virginia Department of Environmental Quality Blue Ridge Regional Office 901 Russell Dr Salem, VA 24153

## Industrial Activities and Potential Pollution Sources:

Industrial activities at the site which potentially may impact water quality from the introduction of pollutants include:

- Concrete batch production and admixtures
- Truck wash down

- Parking areas
- Aggregate and residual concrete storage

## Material Inventory - Present:

Serval types of aggregate are stored on-site (*Table 1*). The aggregate is used in concrete batch production and resale. The materials stored include:

Material	Quantity
Cement	100 Tons
Aggregate	550 Tons
Sand	550 Tons

<sup>\*</sup>All aggregate/sand piles described above are exposed to stormwater. Most gravel-sized aggregate does not present a realistic run off threat. Sand likewise is not a major concern since it can be retrieved and placed back into storage if eroded.

### Material Inventory – Past:

The existing inventory accurately represents the inventory of materials stored at this location in the past.

## Facility Security:

The facility has adequate lighting.

## 3. Best Management Practices (BMP's)

### Operational Controls:

This facility has been evaluated for all applicable Operational Source Controls BMP's as established by the Virginia Department Quality in the Virginia Erosion and Sediment Control Handbook, Second and Third Edition.

### **Housekeeping**

Employees of Chaney Enterprises are responsible for maintaining the facility in a clean and orderly manner. Areas which could contribute to stormwater pollution will be kept so as to minimize its' potential to contribute contaminants.

## Good housekeeping includes:

- -Neat and orderly storage of chemicals inside garages, sea container, and shed
- chemical storage containers labeled and sealed when not in use
- containment of sediment on site within the appropriate bins
- maintaining wash basins so as not to allow discharge of process water

- managing fugitive dust by keeping the yard/entrance clean, and ensuring dust control devices on the plant are operating properly
- prompt cleanup and removal of spillage, and
- storage of garbage and trash in a dumpster.

## Preventive Maintenance

This site is inspected on a routine, periodic basis. Equipment is maintained to the manufacturer's recommendation. Maintenance issues which are identified are addressed in a timely manner.

Stormwater drainage structures are inspected quarterly and serviced as needed.

## Spill Prevention and Cleanup

Potential exists for petroleum spills during vehicle transfer and removal. Spills at this time could contribute to contamination of receiving waters, Virginia regulations require proper design, and maintenance of all tanks and storage areas. Visual inspection of tanks and fueling nozzles and hoses are conducted along with the quarterly site inspections.

## **Sediment and Erosion Control**

The facility is partially paved and during storm events there is the possibility for sediment transport to the stormwater structure on-site. Materials that could potentially be eroded are checked regularly. The hillside to the east of the shop will be checked quarterly for signs of erosion. If issues are found, they will be addressed immediately.

## **Employee Training**

Employees of Chaney Enterprises will undergo annual environmental training. This training includes:

- Environmental awareness
- Site Knowledge
- State regulations and permit requirements
- Plant contents
- Pollution prevention overview
- Spill response procedures
- Housekeeping procedures
- Treatment system functions

## Pollution Prevention Committee

Victor Vilece is the Environmental Project Manager and is responsible for overseeing, implementing, and maintaining this plan. In addition, he is responsible for assisting plant personnel in the full and continual adherence to the plan. This includes making management aware of resource needs. He also oversees all sampling of discharges on an annual basis and prepares and submits

all DMR's. He heads the implementation of the Storm Water Pollution Prevention Plan.

*Kith Wilt* is the General Manager – Shenandoah Valley and his responsibility is to ensure the Plant Manager's adherence to policy.

TBD is the plant manager and is responsible for monitoring treatment systems and implementing BMP's on a daily basis.

All employees at this location are encouraged to bring to the attention of the committee members any deficiency they encounter, or any ideas for storm water protection they may have.

#### Source Controls:

This facility has been evaluated for all applicable Source Control BMP's as established by the Virginia Department of Environmental Quality in the Virginia Erosion and Sediment Control Handbook, Second and Third Edition.

### <u>Treatment BMP's</u>

A Five-tiered washout and settling basin is used to treat process water for sediments (*Figure 3*). Water from the 5<sup>th</sup> tier is used for dust control, truck washing, and recycled into the batch plant. Any issues with the system will be reported to the pollution prevention committee members for immediate correction.

## Run-Off BMP's

Most of the site is graded to direct stormwater to one of two stormwater hasins

Outfall 001 is adjacent to the entrance on N Timber Way and flows into a municipal stormwater sewer.

Outfall 002 is in the stormwater basin adjacent to the entrance on Holsinger Road. A concrete riser in the basin regulates flow to the outfall. The outfall flows into a municipal stormwater sewer.

### Enhanced and / or Additional BMP's

In case enhanced or additional BMP's are deemed necessary, a schedule for implementation will be developed and incorporated into this plan within 30 days of determination. The new BMP's will be implemented with all due diligence. Unless otherwise directed by VADEQ, all newly required operational BMP's will be implemented within 15 days of direction. BMP's that require capital expenditures will be implemented within six months.

## 4. Monitoring Plan

Discharge Points and Flow Characteristics:

When there is surface water discharge from the ready-mix concrete operation the sampling and analytical methods, if used, shall conform to procedures for the analysis of pollutants as identified in 40 CFR Part 136 – "Guidelines Establishing Test procedures for the Analysis of Pollutants" unless otherwise directed by VADEQ.

## Sampling Data Summary:

Sampling is done annually as described in the "Virginia General Discharge Permit" No. VAG110258.

## Visual Monitoring:

The outfalls are inspected quarterly for stormwater discharges. If there is a discharge due to a storm event site staff will complete a Quarterly Visual Monitoring Form (*Appendix C*). Walk through inspections are done quarterly. This includes a visual inspection of stormwater structures, both outfalls, site storage, and site BMPs.

## Unintended Discharges:

There have been no reported incidents of unintended discharges at this location.

### 5. Inspections

Comprehensive Site Compliance Evaluation:

Inspections are performed quarterly and documented with a CEEIP inspection form (*Appendix B*). The inspection reports are retained for three (3) years onsite as well as in the corporate office.

## 6. Compliance with SARA Title II

Chemicals subject to SARA Title III. Section 3 includes diesel fuel. Diesel fuel is subject to the SPCC Plan requirements of the Clean Water Act. The SPCC Plan addresses compatibility, secondary containment, spill prevention, spill control, and drainage. The facility currently does not have a P.E. certified SPCC Plan. There have been no discharges of any material covered under SARA Title III at this facility in the past three (3) years.

## 7. Consistency with Other Statutes and Plans

Chaney Enterprises is subject to certain requirements and schedules that pertain specifically to its reclamation areas. They do not impact the requirements under the Virginia Discharge Permit No. VAG110258.

#### 8. Administration of SWPPP

Access to SWPPP:

This plan will be retained online, a QR code for access at the site is kept at the batch plant office. Upon request it shall be made available to VADEQ. Any requests for a current copy or updates will be honored within two weeks of formal receipt of the request.

Amendments to the SWPPP:

The Plan shall be amended whenever there is a change in design, construction, operation, or maintenance of any BMP's that causes the Plan to be less effective in preventing storm water pollution. It will also be amended upon direction by VADEQ or when visual monitoring indicated a need for an amendment.

Storm Water Pollution Prevention Plan Changes:

Date	Individual Responsible for Change	Nature of Change

### *Inspection and Record Keeping:*

Inspections as required by the Virginia Department of Environmental Quality as described in the Virginia General Discharge Permit No. VAG110258 will be conducted by members of the Pollution Prevention Committee or the Plant's Manager or his authorized representative. Walkthrough inspections are conducted quarterly, and a comprehensive site inspection is done annually. Reports of visual monitoring done by facility staff will be submitted to the Environmental Project Manager. Deficiencies identified will be scheduled for correction. When necessary, a schedule of compliance will be developed and submitted into this Plan. Records of all monitoring information, inspection reports, and any other compliance documentation will be kept for three (3) years. All information described above is available for review by contacting the Environmental Project Manager.

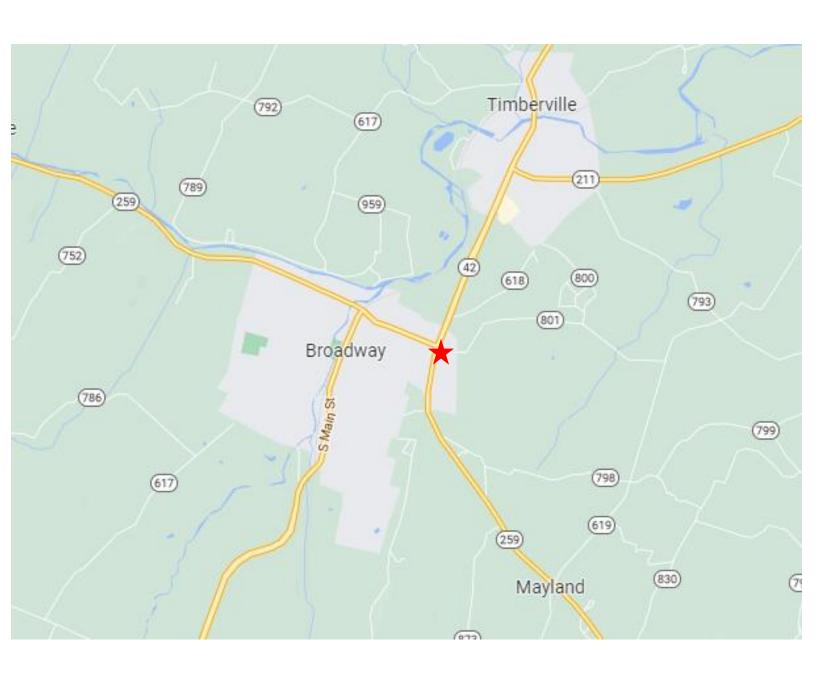

#### Signatures:

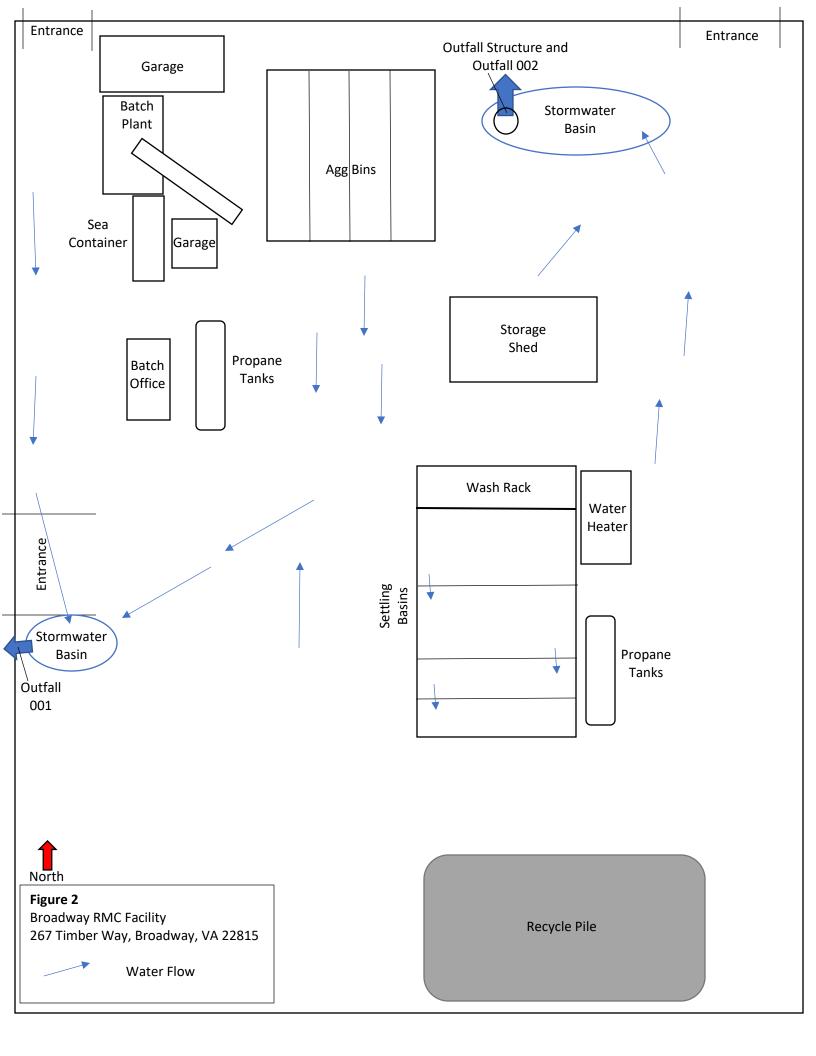

All reports required by the Virginia Department of Environmental Quality as described in the Virginia General Discharge Permit No. VAG110258, the applicable regulations and this Plan, and other documentation requested by the Virginia Department of Environmental Quality shall be signed by the Plant's/Environmental Manager or an employee or agent under his direct supervision. The Plant's/Environmental Manager has been given overall responsibility for these matters by a principal executive officer. All persons signing documents a described above must make the following certification:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person, or persons, who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

## Table 1 MATERIAL INVENTORY

## Most common materials stored on-site

TRADE NAME MATERIAL	PHYSICAL DESCRIPTION	STORM WATER POLLUTANTS
Sand, Gravel	Solid particles	Silicon, suspended solids, turbidity, sediment
Hydraulic oil/fluids	Brown oily petroleum hydrocarbon	Mineral oil
Gasoline	Colorless, plae brown pr pink petroleum hydrocarbon	Benzene, ethyl benzene, toluene, xylene, MTBE
Diesel Fuel	Clear, blue-green to yellow liquid	Petroleum distillate, oil & grease, naphthalene, xylenes
Antifreeze/coolant	Clear green/yellow liquid	Ethylene glycol, propylene glycol, heavy metals (copper, lead, zinc)
DCI S	Clear	pH, Calcium Nitrate
PolarSet	Clear	pH, Calcium Nitrate, Diethylene glycol
Portland Cement	Solid powder, Gray/white, Odorless,	pH, Sediment
Fly Ash	Solid powder, Tan, Odorless	pH, Sediment

<sup>\*</sup>A complete list of chemicals stored at all Chaney Enterprises sites can be found at <a href="https://www.chaneyenterprises.com/Resources/Safety-Data-Sheets">https://www.chaneyenterprises.com/Resources/Safety-Data-Sheets</a>

# TABLE 2 SWPPP IMPLEMENTATION SCHEDULE

SWPPP FEATURE	TARGET IMPLEMENTATION DATE
Environmental compliance inspections (CEEIP)  Appendix A	Quarterly
Implementation of SWM Control Measures	Daily, when plant is operating.
Inspection of Washout Basins  Appendix C	Daily, when plant is operating.
Visual Inspection of Batch Plant Air Filtration System  Appendix D	Daily, when plant is operating.
SWPPP Compliance Assessment  Appendix E	Annually: 4 <sup>th</sup> quarter

## TABLE 3 BMP INSPECTION SCHEDULE

SWPPP FEATURE	TARGET IMPLEMENTATION DATE
Truck Wash Area	Inspect <b>daily</b> for sediment accumulation, Cleaned as needed.
Waste Concrete Storage	Visually inspect <b>quarterly</b> for proper containment. Clean residual waste as needed.
Material Storage Areas, Including Aggregate Stockpiles	Visually inspect <b>quarterly</b> for proper containment, labeling, and signs of leaks or spills.
Entrance, Yard, Stormwater Structures	Visually inspect <b>quarterly</b> for sediment accumulation, dust, and effectiveness in directing storm water.

For BMP Inspection logs see **Appendix B** and **Appendix C**.
