* Highest HAP Emitted (in pounds)							
Five Year Violation History: None							
Performed Stack Tests since last FCE: None							

Location / Facility Summary:

This facility (a typical concrete batch plant) is located off NC Highway 11, near Winterville in Pitt County. From Greenville, travel south on Hwy 11 approximately 4 miles. The facility will be located just past the junction of Hwy 903 and Hwy 11 on your left. Sand, cement, water, and aggregates are weighed in a hopper and gravity fed into a delivery truck. The estimated capacity of the plant is 80 cubic yards/hour. Usual production is ~70 cubic yards/hour. The original name of the facility remains the same. The facility is also known as DPD Team Concrete after the owner Mr. Derick Peyton Dun.

Facility Safety: Required PPE is hardhat, safety glasses, earplugs, and safety-toe shoes. No climbing required.

I conducted a compliance assurance visit with the assistance of Steve Gresham, Plant operator on 8/3/2023. The annual production of 2022 was 55,000 cubic yards. The facility appeared to be operating in compliance with all applicable Federal and State air quality rules, regulations and permit conditions at the time of inspection.
